

ALpay

The first Albanian cryptocurrency
ever created.

Abstract

Smart contract is one of the most important parts of modern blockchains. Smart contracts are deployed on blockchains, triggered automatically and cannot be modified after deployed. These characteristics make smart contracts the best solution for traditional digital contracts.

Introduction

Smart contracts are applications deployed and executed on decentralis ed systems. Any changes cannot be made once a smart contract is deplolyed on a blockchain. Smart contracts are more secure compared with traditional contracts, as anyone(including the author) has the same authority. Smart contracts are automatically executed when they meet the requirements;

AL token usage:

ALpay is a TRC-20 token.

ALpay was created for daily payments for business, to make it easier to create transactions.

Roadmap and Future Plan

The future plan for ALpay is to create its own blockchain, to create wallet app for ALpay and to create an app for business wallet where where people can pay for everything to make it easier for all community in Albania and Kosovo.
